

# AnchorVault

## Decentralized Cross-Border Remittances

---

Built on [Stellar](#) & [Soroban Smart Contracts](#)

# The Problem: Capital Inefficiency

---

Cross-border payment anchors face massive hurdles scaling operations.

- **Trapped Capital:** Millions locked upfront to process daily remittances.
- **Lost Opportunity:** Idle cash reserves provide zero yield.
- **Fragmented Liquidity:** Traditional rails are slow and siloed.

!["website phtoo/Screenshot 2026-06-06 194158.png")

# The Solution: AnchorVault Protocol

---

Bridging Liquidity Providers with authorized off-ramp anchors.

- **For LPs:** Deposit USDC to earn organic, institutional-grade yield.
- **For Anchors:** Draw borrowed USDC to settle payments instantly.
- **Result:** Infinite scalability without locking operational capital.

!["website phtoo/Screenshot 2026-06-07 003329.png"]

# Liquidity Providers (LPs)

---

Fueling the global remittance corridors safely and efficiently.

- **Mint \$AVLT:** Depositors receive Vault Share Tokens.
- **Real Yield:** LPs earn 90% of settlement fees generated from real payment flows.
- **Transparent Risk:** All reserves are 100% on-chain on Stellar.

!["website phtoo/Screenshot 2026-06-07 003402.png"]

# Anchor Operations & Draws

---

Off-ramp providers can unlock massive liquidity lines.

- **Whitelisting:** Anchors lock collateral in the Anchor Registry.
- **Instant Draws:** Whitelisted anchors pull USDC to settle fiat payouts instantly.
- **Two-Slope Utilization Curve:** Borrowing costs dynamically penalize late repayments.

# Galileo: AI Risk Copilot

---

Uncollateralized lending secured by state-of-the-art AI.

- **Constant Monitoring:** Analyzes anchor behavior and ledger metrics.
- **Autonomous Slashing:** Automatically cuts credit limits upon risky behavior.
- **Insurance Fund:** 5% of all fees programmatically protect LP capital.

("website phtoo/Screenshot 2026-06-07 003504.png")

# Deep Ecosystem Integrations

---

AnchorVault is designed to expand the Stellar ecosystem utility.

- **Soroban Contracts:** 100% Rust logic running on Mainnet.
- **Stellar Wallets Kit:** Seamless multi-wallet authentication.
- **Freighter Connect:** Native browser-based transaction simulation.

!["website phtoo/Screenshot 2026-06-07 003538.png"]

# Live on Stellar Mainnet

---

We are already deployed and fully operational!

- **Verified Contracts:** Auditable and live.
- **High-Fidelity DeFi Portal:** Obsidian-glass UI optimizing user experience.

# Roadmap & SCF Ask

---

Applying for the **SCF Build Integration Track** grant.

## Next Steps:

1. Bootstrap initial pool liquidity.
2. Whitelist 3-5 major global off-ramp corridors.
3. Conduct comprehensive Soroban security audits.
